

SCREENWOOD

MODULO

Environment

The EO MR MDF used in the production of MODULO is sourced exclusively from PEFC certified Australian mills.

MODULO is certified for Global Green Tag™.

Environmental considerations are a cornerstone of design and production at Screenwood.

Screenwood seeks to ensure that sustainability concerns are integrated throughout the entire value chain, from order to site installation. To this end, for production of MODULO we use only high-quality, sustainable materials and supplies in its production and workplace.

Certification

Screenwood is proud to achieve Global Green Tag™ certification to Level B and the Platinum Level Health Rate.

Gaining recognised certification demonstrates our commitment to supply products of the utmost environmental integrity and provide a safe and sustainable environment throughout production to final use.

Green Tag accreditation provides assurance of several key areas such as health and safety, eco-toxicity, post-consumer recycled content, waste reduction, compliance with environmental and labour legislation, no heavy metals and low VOC content. This accreditation means that building owners and architects can utilise the GreenStar sustainability tool which is offered through the Green Building Council of Australia for their projects. They will have access to product credits through this scheme by utilising MODULO.

VOC

MODULO has been tested in accordance with ASTM D5116-2017 small chamber test. Results for Group 3 products are below the limits specified by Green Building Council of Australia, Green Star Interiors requirements.
