

Install Guide

Stix[®] MR Stix[®] FR

The prefinished decorative architectural battens for design flexibility.

Stix®

Installation Guide

Suitable Applications

Stix® are loose decorative timber battens, available in a range of sizes and profiles and prefinished in NAVURBAN™ finishes. Stix® integrates seamlessly with our Modulo®, Soundlina® and Panels ranges, or can be used as standalone decorative battens.

Stix® battens are available in Group 2 and Group 3 fire-rated substrates. They are not suitable for use in wet areas or external use.

Before you begin

Fixing

- Stix® is not suitable for structural applications.
- The olefin film wrapping requires a small overlap to one face of the profile. We recommend that the overlap is installed against the wall or surface that the profile is being adhered to.

Cutting

- Cutting of Stix® should be done by qualified trades using a drop saw or panel saw with carbide tipped blades and can be cut with the use of routers, trimmers and other joinery tools typically used when fabricating MDF.

Moisture

- Although Stix® MR is manufactured from moisture resistant (MR) MDF, the end grain of Stix® cannot get wet. Ends should be sealed in installations where accidental ingress of water or moisture may occur.
- Stix® used for walls should be kept at least 20mm above a floor surface and care must be taken when floors are being mopped/cleaned. The warranty does not cover damage from water ingress.

Care and Maintenance

- NAVURBAN™ surfaces are easy to clean using a damp cloth and mild soap and warm water or non-abrasive wood cleaning products.
- We recommend you test on a small area or sample prior to applying to surface.
